

To whom it may concern

OPENINTEGRA is KCM AD support service and infrastructure partner since 2008. They are a reliable partner, who, in all aspects of our relationship, has proved high level of technology and commercial expertise. We were quite impressed by the team's internal strive for excellence, the positive and optimistic attitude shown in our everyday work and work product deliverables, as well as strong professional competences of the management and the whole team.

OPENINTEGRA serves KCM's local and regional infrastructure with technology and services made possible by the open source model. Solutions include Enterprise Linux, clustering and broad range of management and monitoring services and support. Our main e-mail infrastructure is based on OPENINTEGRA Secure E-Mail solution including LDAP Identity management based on Fedora/Red Hat Directory server and additional security layer ensuring an encrypted message transmission channel and confirming the sender's identity.

OPENINTEGRA's team deep knowledge in infrastructure and internet technologies was an invaluable asset for our daily work and operations.

I am confident to recommend OPENINTEGRA as a reliable service provider with serious knowledge and expertise in web, internet and telecom technologies, and excellent delivery capabilities in terms of time, budget and quality.
